

contactbook

Smartphone app
(for iPhone & Android
<https://contactbook.info>)

Introduction

Description: ContactBook is an app to share contact data between people. Contact data includes phone numbers, e-mail addresses, physical addresses, social media links, etc. The contact data will be automatically updated on smart phones and on desktop mail clients.

The app is currently being developed and the first release will have the following user interfaces:

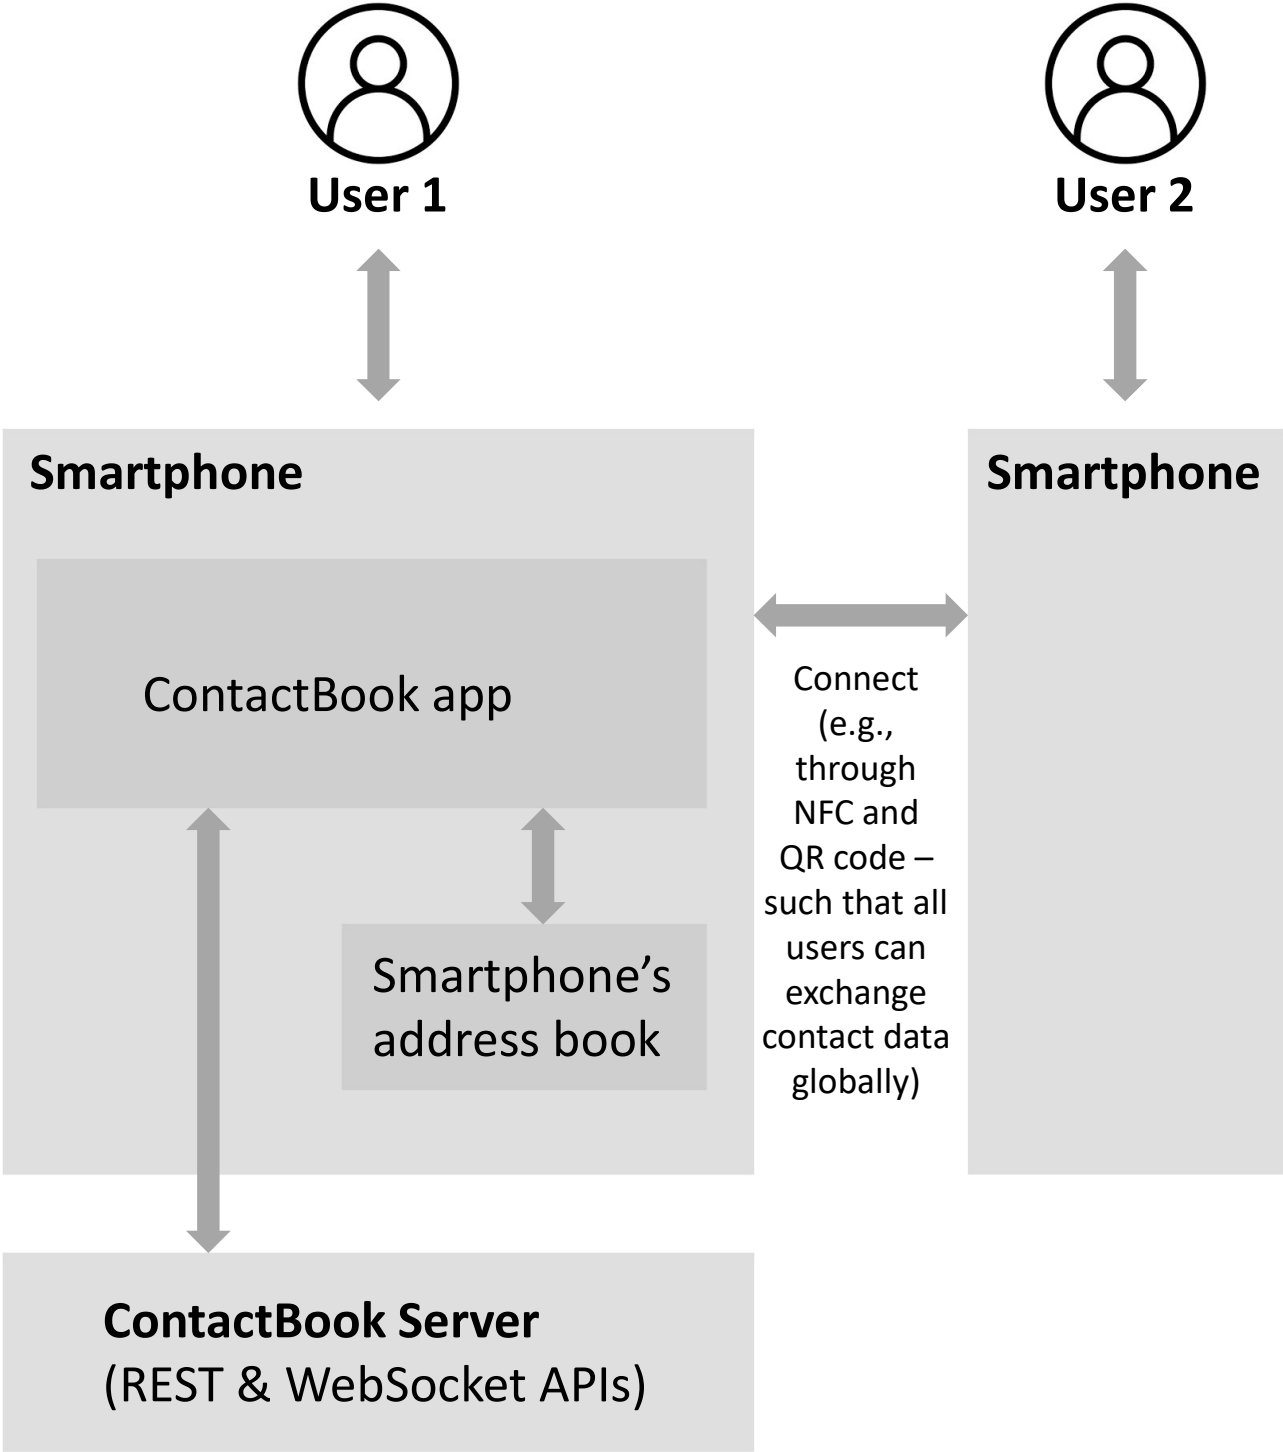

- Website (<https://www.contactbook.info>)
- Smart phones (iOS & Android)
- Mail clients (Outlook)
- Invitation are sent e-mails and SMS (or from smartphone to smartphone when people are close to each other)

Situation: We are currently searching for one or two developer to build an iOS and/or Android version of the app. You can either build one or both apps.

Your task: Your task is to provide a proposal for the implementation of an iOS and/or Android app (timeframe, budget, etc.).

Legal aspects: All development done by the developer belongs to ContactBook. The developer is not allowed to reuse the code for other apps. The owners of ContactBook.info are entitled to make any changes to the code later on.

Sync ContactBook contacts on iPhone

Architecture: Interface to address book on smartphone

There are two activities with the address book:

1. Save and update contacts from ContactBook on mobile phone
2. Access contacts to invite other people to ContactBook

Architecture: ContactBook Server
